

# Herculok Full Floor Aeration

## Floors

The Superior Herculok® Floor design removes no steel in the forming process, making our floors 12% heavier and more than twice as strong as other floors. Designed for loads up to 88' high, its easy cleaning surface, zero kernel blockage and no fines features make it the floor of choice. We also have .05 and .093 perforated floors available.

866-822-9145

## Floor Supports

Superior floor supports are 4x stronger than competitors floor supports. Our deep rib supports provide Superior strength. Coupled with a Herculok® floor, they are an unbeatable combination! Welded Supports are also available.

## Flashing

Superior offers both Lo-Back and High-Back Flashing. The ribbed flashing provides the strength required for taller eave heights and traction for Superior sweep wheels.
